Chemillion Company Profile Website — PRD

Oct 29, 2026 · @M.J. Fird

Chemillion needs a fast, SEO-strong company profile site in English (Indonesian later) where every headline, paragraph and image is editable from an admin dashboard, and every contact form submission lands in an Inquiries inbox inside that same dashboard.

Goals & success metrics

The site exists to turn B2B buyers searching for chemicals into qualified inquiries, while letting Chemillion's team run it without a developer.

Goal	Metric	Target
Generate qualified leads	Contact form submissions captured in the dashboard	100% of submissions stored; 0 lost
Be found on Google	Pages indexed in Google Search Console	All public pages indexed within 4 weeks of launch
Load fast on mobile	Lighthouse Performance (mobile) on Home, Products, Product detail	90 or higher
Pass Core Web Vitals	LCP / INP / CLS at the 75th percentile	under 2.5 s / under 200 ms / under 0.1
Self-service content	Copy or image change made by admin without code	Under 5 minutes, live on the site within 60 seconds
Credibility	Bounce rate on Home	Under 55% after 3 months (baseline TBD)

Primary audience: procurement managers, plant engineers and lab heads looking for industrial chemicals, specialty chemicals, raw materials and lab reagents. They scan for product range, certifications, reliability and a fast way to request a quote.

Scope

Version 1 ships the public site in English plus the full admin dashboard; Indonesian is built for from day one but switched on in phase 2.

In scope (v1)

- Public pages: Home, About Us, Products (category + detail), Partners, News (list + article), Contact, Privacy Policy, 404
- Admin dashboard: edit all page copy and images, manage products, categories, partners, news, site settings, SEO fields
- Inquiries inbox: every contact/quote form submission stored and managed in the dashboard, with email notification
- "Get a Quote" button wired to the same inquiry system, pre-filled with product when clicked from a product page
- Technical SEO, sitemap, structured data, analytics
- Responsive design matching the attached mockup (desktop, tablet, mobile)

Phase 2

- Indonesian language (`/id/` routes), translated content entry in the dashboard, language switcher
- Downloadable product documents (TDS / SDS / COA PDFs) per product, if not ready for v1

Out of scope

- E-commerce, cart, online payment or live pricing
- Customer login / client portal
- Live chat (a WhatsApp click-to-chat button is optional, see Open questions)

Users & roles

Three roles are enough for v1; keep permissions simple so the client can actually manage them.

Role	Who	Can do
Visitor	Buyers, partners, job seekers, press	Browse pages, read news, submit inquiry

Role	Who	Can do
Admin	Chemillion owner / marketing lead	Everything: content, products, news, partners, inquiries, settings, user management
Editor	Marketing staff	Edit content, products, news, partners; view and reply to inquiries; no settings or user management

Optional later: a Sales role that sees only the Inquiries inbox.

Sitemap & navigation

The nav bar is five items plus one CTA: **About Us · Products · Partners · News · Contact**, then a red **Get a Quote** button. The logo links Home, so "Home" is dropped from the nav (the mockup's Industries and Resources items are removed).

Why this order: visitors expect Contact last; News sits before it so the two conversion points (Contact, Get a Quote) stay together on the right. News is hidden from the nav automatically until at least 3 articles are published, so the site never shows an empty section.

Page	URL (English)	Purpose	Key content
Home	`/`	First impression, route to products and inquiry	Hero, value props, product categories, why Chemillion + stats, CTA banner
About Us	`/about`	Trust and credibility	Story, vision/mission, values, certifications, facilities, stats
Products	`/products`	Browse the range	All categories, intro, CTA
Product category	`/products/{category}`	List products in one category	Category hero, description, product cards

Page	URL (English)	Purpose	Key content
Product detail	`/products/{category}/{product}`	Convert interest into a quote request	Images, specs table, applications, packaging, documents, Request a Quote
Partners	`/partners`	Show principals, suppliers, key clients	Logo grid by type, optional short description
News	`/news`	Freshness and SEO	Article list, pagination, category filter
News article	`/news/{slug}`	Long-tail SEO, announcements	Title, cover, body, date, related articles
Contact	`/contact`	Inquiry capture	Form, address, phone, email, map, office hours
Privacy Policy	`/privacy`	Legal, required because the form collects personal data	Editable rich text
404	any unknown URL	Recover lost visitors	Message, search-free links to Products and Contact

Footer mirrors the mockup: logo, Quick Links, Products (top categories, auto-generated), Contact details, social icons (LinkedIn, Instagram, YouTube), copyright. Mobile nav: hamburger opening a full-height panel with the same five items and the Get a Quote button pinned at the bottom.

Page requirements

Every text and image on every page comes from the dashboard; nothing visible to visitors is hard-coded except layout and icons.

Design system (from the mockup)

- Colours: crimson red for CTAs and accents (approx. #E1223B), deep teal for highlighted headline words and dark bands (approx. #0F6B70), near-black headings, white and light grey (#F5F6F7) backgrounds. Exact hex values to confirm against Chemillion's brand guide.
- Shape language: diagonal cuts and the red/teal folded-arrow mark from the logo, used as image masks and section dividers. Built in CSS/SVG, not baked into photos, so admins can swap images without breaking the shape.
- Type: geometric sans for headings (similar to the mockup), clean sans for body; self-hosted, max 2 families, 4 weights, `font-display: swap`.
- Small spaced-caps eyebrow labels above every section title ("OUR PRODUCTS", "WHY CHEMILLION").
- Buttons: red pill primary with arrow icon, white outlined pill secondary.

Home

#	Section	Editable in dashboard
1	Header: logo, nav, Get a Quote	Logo (light/dark), CTA label
2	Hero: eyebrow, 2-tone headline, paragraph, 2 buttons, masked image, floating badge (Quality / Safety / Sustainability)	All text, which headline words are teal, button labels + links, hero image + alt text, badge lines
3	Value props: 3 icon cards (High Quality, Trusted Supply, Sustainable Solutions)	Title, text, icon picked from a set, order
4	Product Categories: eyebrow, title, intro, View All link, 5 image cards	Section text; cards pull from Product Categories automatically (image, name, order, show on Home toggle)
5	Why Chemillion: masked plant image, title, paragraph, Learn More, 3 stats	All text, image, button link, stats (number, suffix like "+", label), count-up animation on scroll

#	Section	Editable in dashboard
6	CTA banner: teal band, image, title, text, Contact Our Team button	All text, image, button link
7	Footer	Address, phone, email, social URLs, copyright from Site Settings

Optional Home sections the admin can toggle on later: Partners logo strip, Latest News (3 cards).

About Us

- Hero with title, intro and image
- Company story (rich text + image)
- Vision and mission (2 cards)
- Values (repeatable icon cards)
- Certifications and compliance (repeatable: logo, name, short text, optional PDF), e.g. ISO, halal, K3
- Facilities / warehouse gallery (repeatable images with captions)
- Stats block (reuses the Home stats or its own)
- CTA banner

Products

- **Products index**: hero, intro, grid of all categories with product counts.
- **Category page**: hero image and description, product cards (image, name, CAS number, short description), filter by application if more than 12 products.
- **Product detail**: image gallery, name, CAS number, grade, short and long description, specifications table (admin adds rows: property, value, unit), applications/industries tags, packaging options, downloadable TDS/SDS (phase 2 if documents not ready), related products, sticky **Request a Quote** button that opens the inquiry form with the product pre-filled.
- No prices shown anywhere.

Partners

- Intro text

- Logo grid grouped by type (Principals, Suppliers, Clients, Distributors — types editable), each logo grayscale and colour on hover, optional link and one-line description
- CTA: "Become a Partner" opening the inquiry form with subject set to Partnership

News

- List: cover image, title, date, excerpt, category; 9 per page with numbered pagination (crawlable links, not infinite scroll)
- Article: title, date, author, cover, rich-text body with images, share links, 3 related articles, CTA banner
- Draft / scheduled / published states

Contact

- Inquiry form (see Contact form & inquiries)
- Office address, phone, email, office hours, all from Site Settings
- Map: a static map image that loads Google Maps only on click, to protect page speed
- Optional WhatsApp button

Admin dashboard

The dashboard lives at `/admin`, is login-protected, and lets a non-technical person change any copy or image and see it live within 60 seconds.

Modules

Module	What admins do	Notes
Dashboard home	See new inquiries count, latest 5 inquiries, recently edited content	Quick links to most-used modules
Pages	Edit each page's sections (Home, About, Products index, Partners, News index, Contact, Privacy)	Structured fields per section, not a free page builder, so the design cannot be broken
Product Categories	Create, edit, reorder, hide; image, description, show on Home	Drag to reorder

Module	What admins do	Notes
Products	Create, edit, duplicate, hide; gallery, specs rows, applications, packaging, documents	Duplicate speeds up similar products
Partners	Add logo, name, type, link, order	SVG or PNG; auto-resized
News	Write with rich text editor, cover, category, tags, author, schedule publish	Draft / scheduled / published
Inquiries	Inbox of form submissions (see next section)	Unread badge in sidebar
Media Library	Upload, search, replace, delete images and PDFs; edit alt text	Shows where each file is used before deleting
SEO	Per page/product/article: meta title, description, OG image, canonical, noindex toggle	Character counters and a Google preview snippet
Site Settings	Logo, contact details, social links, footer text, notification email(s), analytics IDs, redirects	Admin only
Users	Invite, set role, deactivate, reset password	Admin only

Editing experience requirements

- **Live preview** of the page before publishing; changes save as draft until "Publish".
- **Version history** per page/item with one-click restore (keep at least the last 20 versions).
- **Image handling**: on upload, the system auto-generates WebP/AVIF in several widths; admin sets a focal point so masks and crops keep the subject in frame. Max upload 10 MB; warn if under recommended size (e.g. hero under 1920 px wide).
- **Alt text** field required on every image upload (SEO and accessibility).
- **Rich text** limited to headings H2–H4, bold, italic, links, lists, images, tables, so content stays on-brand.
- **Highlighted headline words**: admin marks which words render in teal (e.g. wrap in a highlight mark) rather than typing colour codes.

- **Field hints** under each field with recommended length, e.g. "Hero headline: 4–8 words".
- **Publish speed**: publishing triggers on-demand revalidation so the live page updates within 60 seconds while the site stays static and fast.
- Dashboard works on tablet; mobile is read-only friendly for checking inquiries on the go.

Contact form & inquiries

One form powers Contact, Get a Quote, Request a Quote (product) and Become a Partner; every submission is saved to the database first, then emailed, so nothing is lost if email fails.

Form fields

Field	Type	Required	Notes
Full name	Text	Yes	
Company	Text	Yes	B2B qualifier
Email	Email	Yes	Format validated
Phone / WhatsApp	Tel	Yes	Country code selector, default +62
Country	Dropdown	No	Default Indonesia
Inquiry type	Dropdown	Yes	Product quote, General, Partnership, Other (options editable)
Product(s) of interest	Multi-select	No	Pre-filled when coming from a product page
Estimated quantity	Text	No	e.g. "5 tons / month"
Message	Textarea	Yes	20–2,000 characters
Attachment	File	No	PDF/JPG/PNG, max 5 MB (spec sheets, RFQs)
Consent	Checkbox	Yes	Agree to Privacy Policy (required under Indonesia's PDP Law, UU 27/2022)

Hidden fields captured automatically: source page URL, form origin (Contact / Quote / Partner), UTM parameters, submitted timestamp, language.

Submission flow

1. Client-side validation shows inline errors without reloading.
2. Server validates again, checks anti-spam, then saves the inquiry with status **New**.
3. Visitor sees a thank-you state on the page (and a `/thank-you` URL for conversion tracking).
4. Notification email goes to the addresses set in Site Settings; the visitor gets an auto-reply confirmation (template editable in the dashboard).
5. Inquiry appears in the dashboard inbox with an unread badge.

Inquiries inbox

- List with filters: status, inquiry type, date range, product; search by name, company, email.
- Detail view: all fields, attachment download, source page, UTM, internal notes, activity log.
- Status workflow: **New → In progress → Quoted → Won / Lost**, plus **Spam**.
- Assign to a team member.
- "Reply by email" button opens the admin's mail client pre-filled; "WhatsApp" button opens wa.me with the number.
- Export to CSV (date range + filters) for sales reporting.
- Data retention: inquiries older than a set period (default 24 months) can be archived or deleted, in line with the privacy policy.

Anti-spam

- Invisible CAPTCHA (Cloudflare Turnstile recommended: free, privacy-friendly, no puzzles for real users)
- Honeypot field + minimum time-to-submit check
- Rate limit: max 5 submissions per IP per hour
- Server-side file type and size checks; attachments stored privately, never publicly linkable

Performance

Public pages are pre-rendered as static HTML and served from a CDN, so a visitor never waits for the database; the dashboard is the only dynamic part.

Budgets (per page, mobile, 4G)

Metric	Budget
Lighthouse Performance	90 or higher
Largest Contentful Paint	under 2.5 s (aim under 1.8 s)
Interaction to Next Paint	under 200 ms
Cumulative Layout Shift	under 0.1
Time to First Byte	under 600 ms
JavaScript shipped to browser	under 100 KB gzipped on Home
Total page weight (first load)	under 1.5 MB on Home
Web fonts	max 4 files, under 150 KB total

How we hit them

- Static generation + on-demand revalidation when admins publish (no rebuild of the whole site).
- CDN in front of everything (Cloudflare free plan is enough), with an Indonesian/Singapore edge for local visitors.
- Images: automatic AVIF/WebP, responsive `srcset`, explicit width/height to prevent layout shift, lazy-load everything below the fold, hero image preloaded with high priority.
- Mostly server-rendered HTML; JavaScript only for nav menu, form, stat count-up and gallery.
- Self-hosted, subset fonts; no Google Fonts request chain.
- Third-party scripts (analytics, maps, WhatsApp) loaded after interaction or idle; Google Maps only on click.
- Decorative diagonal shapes in CSS/SVG, not extra images.
- Animations CSS-only and respecting `prefers-reduced-motion`.

- Performance budget checked in CI (Lighthouse CI) so a heavy change fails before it goes live.

SEO

SEO is built into the data model, not added afterwards: every page, category, product and article has its own SEO fields with sensible auto-fallbacks.

Technical

- Clean, lowercase, hyphenated URLs; slugs editable with an automatic 301 redirect when changed.
- Auto-generated `sitemap.xml` (split by pages, products, news) and `robots.txt`; sitemap pinged on publish.
- Canonical tag on every page; pagination pages self-canonical.
- Redirect manager in Site Settings (301/302) for old URLs.
- Proper 404 status for missing pages; no soft 404s.
- HTTPS only, `www` vs non-`www` decided once and enforced.
- Server-rendered HTML for all public content (no content hidden behind JavaScript).
- `noindex` on `/admin`, `/thank-you`, search/filter result URLs.

On-page

- Exactly one H1 per page; logical H2/H3 order.
- Meta title (50–60 characters) and description (140–160) per item; fallback: `{Name} | Chemillion` and the first 155 characters of the description.
- Open Graph and Twitter card image per item; fallback to a branded default.
- Required alt text on images; descriptive file names kept on upload.
- Internal linking: product pages link to their category and related products; news articles can link products; breadcrumbs on all inner pages.
- Product pages carry the searchable details buyers type: product name, synonyms, CAS number, grade, application, packaging.

Structured data (JSON-LD)

Page	Schema
All pages	`Organization` (name, logo, contact, social profiles), `WebSite`
Contact	`LocalBusiness` with address, geo, phone, opening hours
Inner pages	`BreadcrumbList`
Product detail	`Product` (name, image, description, brand, identifiers such as CAS via `additionalProperty`); no price/offer
News article	`NewsArticle` (headline, image, datePublished, dateModified, author)

Launch tasks

- Verify Google Search Console and Bing Webmaster Tools; submit sitemap.
- Create/claim Google Business Profile with the same name, address and phone as the site.
- Keyword map per page before copywriting (e.g. "chemical supplier Indonesia", "distributor bahan kimia", product names + "supplier").

Multilingual readiness

v1 launches English-only, but every content field is stored as localizable from day one, so adding Indonesian later is a content task, not a rebuild.

- **URL strategy**: English at the root (`/products`), Indonesian under `/id/` (`/id/produk` with translated slugs). Subfolders keep all SEO authority on one domain.
- **Data**: text fields localized (EN, ID); images, numbers, CAS codes shared across languages unless overridden.
- **UI strings** (button labels, form errors, footer labels) stored in translation files, not hard-coded in components.
- **Fallback**: if an Indonesian field is empty, show English rather than a blank, and flag it in the dashboard as "missing translation".

- **SEO**: `hreflang` tags (`en` , `id` , `x-default`) and per-language sitemaps generated automatically once ID is switched on; `<html lang>` set per page.
- **Dashboard**: language toggle on every edit screen; a "Translation status" view listing items missing ID.
- **Switcher**: EN / ID toggle in the header, keeps the visitor on the equivalent page; no automatic redirect by IP (bad for SEO and for foreign buyers in Indonesia).
- Inquiries record the language the form was submitted in.

Tech stack & hosting

Recommended: **Next.js + Payload CMS + PostgreSQL**, in one codebase on one VPS behind Cloudflare. Payload gives the admin dashboard, roles, media handling, versions, drafts, live preview and field-level localization out of the box, so the budget goes into the site, not into rebuilding a CMS.

Recommended stack

Layer	Choice	Why
Framework	Next.js (App Router), static generation + on-demand revalidation	Static-fast pages that still update within seconds of publishing; strong SEO tooling
CMS / dashboard	Payload CMS (runs inside the Next.js app)	Open source, self-hosted, no per-seat fees; built-in auth, roles, drafts, versions, localization, live preview
Database	PostgreSQL	Reliable, free, Payload has a first-class adapter
Styling	Tailwind CSS	Small CSS output, fast to match the mockup
Media storage	Local disk on the VPS to start; Cloudflare R2 (S3-compatible) when media grows	R2 has no egress fees
Image optimization	Sharp (via Payload/Next) to AVIF/WebP	Automatic sizes and formats

Layer	Choice	Why
Email	Transactional service via SMTP/API (e.g. Resend, Brevo, or Amazon SES)	Notifications and auto-replies land in inboxes, not spam; set SPF/DKIM/DMARC
Anti-spam	Cloudflare Turnstile	Free, invisible
Hosting	Single cloud VPS (2 vCPU / 4 GB RAM is enough), Node + Postgres + Nginx/Caddy, PM2 or Docker	Predictable yearly cost; full control
CDN / DNS / SSL	Cloudflare (free)	Caching, DDoS protection, edge close to Indonesian visitors
Analytics	Google Analytics 4 + Search Console (or Plausible/Umami for a lighter, cookie-free option)	Lead and traffic tracking
Code & CI	GitHub + GitHub Actions (build, Lighthouse CI, deploy)	Repeatable deploys

Alternatives considered

Option	Pros	Cons	Verdict
Next.js + Payload on VPS (recommended)	One codebase, fast, flexible, no licence fees, i18n built in	Needs someone comfortable with a Linux VPS	Best balance
Next.js on Vercel + Payload + managed Postgres (Supabase/Neon)	Zero server maintenance, preview deploys	Monthly fees per service, costs grow with traffic; data split across vendors	Good for prototyping, then move to VPS
Astro + headless CMS	Smallest JS, top speed	Separate CMS to host or pay for; more glue code for inquiries	Fine, but more moving parts

Option	Pros	Cons	Verdict
WordPress + custom theme	Familiar to many clients, huge plugin ecosystem	Slower without heavy caching, plugin security updates, harder to hit 90+ Lighthouse	Only if the client insists on WordPress
Custom-built dashboard	Exactly what's needed	Rebuilding auth, media, versions, i18n by hand; months of extra work	Not worth it

Prototype on GitHub + Vercel for fast client review, then go live on the VPS for predictable annual cost.

Data model

Eleven collections and globals cover the whole site; fields marked (L) are localizable for Indonesian later.

Collection / global	Key fields
Global: Site Settings	logo, logo_dark, company_name, address (L), phone, whatsapp, email, office_hours (L), social_links[], footer_text (L), notification_emails[], auto_reply_template (L), analytics_ids, default_og_image
Global: Navigation	items[] (label (L), link, order, visible), cta_label (L), cta_link
Pages (Home, About, Products index, Partners, News index, Contact, Privacy)	slug, sections[] as typed blocks (hero, value_props, category_grid, why_us, stats, cta_banner, rich_text, gallery, certifications, partners_strip, latest_news), each with its own text (L) and images, seo{}
Product Categories	name (L), slug (L), description (L), image, icon, order, show_on_home, seo{}

Collection / global	Key fields
Products	name (L), slug (L), category, cas_number, grade, short_description (L), description (L), gallery[], specs[] (property (L), value, unit), applications[] (L), packaging[] (L), documents[] (title (L), file), related_products[], status, seo{}
Partners	name, logo, type, url, description (L), order, visible
News	title (L), slug (L), excerpt (L), body (L), cover, category, tags[], author, published_at, status (draft/scheduled/published), related_products[], seo{}
Inquiries	name, company, email, phone, country, type, products[], quantity, message, attachment, consent, source_url, form_origin, utm{}, language, status, assigned_to, notes[], created_at
Media	file, alt (L), caption (L), focal_point, sizes (auto)
Users	name, email, role (admin/editor), active
Redirects	from, to, type (301/302)

`seo{}` = meta_title (L), meta_description (L), og_image, canonical, noindex.

Non-functional requirements

Security

- Admin login with strong password rules, rate-limited login, optional 2FA for admins.
- Role-based access enforced on the server, not only hidden in the UI.
- HTTPS everywhere, security headers (CSP, HSTS, X-Frame-Options), Cloudflare WAF basic rules.
- Form uploads stored outside the public folder and scanned for type; no executable files.

- Secrets in environment variables, never in the repository.
- Dependencies updated monthly; OS security updates automatic on the VPS.

Accessibility

- WCAG 2.1 AA: colour contrast checked (white text on the red CTA and teal band must pass 4.5:1), visible focus states, keyboard-navigable menu and form, labelled form fields, error messages announced to screen readers.

Analytics & tracking

- GA4 events: form_start, form_submit (by origin), click_quote, click_whatsapp, click_phone, click_email, file_download.
- Cookie/consent banner only if non-essential cookies are used; a cookie-free analytics tool avoids it.

Backups & reliability

- Daily automated Postgres backup + media backup, kept 30 days, stored off the VPS (e.g. R2 or another provider); restore tested before launch.
- Uptime monitoring with alert to email/WhatsApp (e.g. UptimeRobot free).
- Target uptime 99.5%.

Browser & device support

- Last 2 versions of Chrome, Safari, Edge, Firefox; iOS Safari and Android Chrome.
- Breakpoints: 360, 768, 1024, 1440 px.

Legal

- Privacy Policy page and consent checkbox, aligned with Indonesia's Personal Data Protection Law (UU PDP No. 27/2022).
- Only licensed or owned photography; stock images credited where required.

Delivery phases & acceptance criteria

Estimated 7–9 weeks to v1 launch for one developer, assuming content and photos arrive by week 4; Indonesian adds roughly 1–2 weeks of dev plus translation time.

Phase	Est. duration	Deliverables	Done when
1. Discovery & content plan	1 week	Confirmed sitemap, keyword map, content checklist, brand assets	Client signs off sitemap and content list
2. Design finalization	1–2 weeks	Hi-fi desktop + mobile for all page templates, dashboard field list	Client approves designs
3. Build: frontend	2–3 weeks	All templates responsive, components, animations	Matches approved design at 360/768/1440 px
4. Build: dashboard & inquiries	1–2 weeks (parallel)	Collections, roles, inquiry flow, emails, media	Admin can edit every section; test inquiry arrives in inbox and email
5. Content entry & SEO	1 week	Real copy, images, products, meta, schema	No lorem ipsum left; all SEO fields filled
6. QA & launch	1 week	Testing, performance tuning, backups, DNS, Search Console	All acceptance criteria below pass
7. Phase 2: Indonesian	1–2 weeks + translation	`/id/` routes, switcher, hreflang, translated content	ID pages indexed, no missing translations

Acceptance criteria (v1 launch)

- [ ] Nav shows About Us, Products, Partners, News (when 3+ articles), Contact and Get a Quote on desktop and mobile
- [ ] Every text and image visible on public pages can be changed from the dashboard, and the change appears live within 60 seconds of publishing
- [ ] Editor role cannot reach Site Settings or Users
- [ ] A form submission from Contact, Get a Quote, a product page and Partners each appears in Inquiries with the correct origin and pre-filled product
- [ ] Notification email and visitor auto-reply arrive and are not marked as spam
- [ ] Inquiries can be filtered, given a status, assigned, noted and exported to CSV
- [ ] Spam test (bot submission, honeypot filled) is blocked

- [ ] Lighthouse mobile: Performance 90+, SEO 100, Accessibility 95+, Best Practices 95+ on Home, a category, a product and an article
- [ ] sitemap.xml, robots.txt, canonical tags and JSON-LD validate (Google Rich Results Test passes)
- [ ] Changing a product slug creates a working 301 redirect
- [ ] Daily backup runs and a restore has been tested
- [ ] No lorem ipsum, broken links or missing alt text (crawl report clean)
- [ ] Content fields are stored as localizable, ready for Indonesian

Open questions for Chemillion

- [ ] Exact brand colours, fonts and logo files (SVG) — or should we derive them from the mockup?
- [ ] Domain name and where DNS is managed today?
- [ ] Who receives inquiry notifications (one shared inbox, or per inquiry type)?
- [ ] How many products and categories at launch, and are TDS/SDS documents ready to publish?
- [ ] Partners page: are partner/principal logos cleared for public use?
- [ ] Will there be news content regularly (at least 1–2 articles/month)? If not, launch without News in the nav.
- [ ] WhatsApp click-to-chat button wanted? Which number?
- [ ] Certifications to show on About Us (ISO, halal, K3, others)?
- [ ] Photography: real facility/product photos available, or stock for v1?
- [ ] Hosting preference and who maintains the server after launch (maintenance retainer)?
- [ ] Analytics: Google Analytics 4, or a cookie-free tool to avoid a consent banner?
- [ ] Target date for Indonesian version?
